Shetland Space Centre

The Shetland Space Centre is a satellite launch site in Unst, Shetland, the UK's most northerly island. SSC plans to build and operate the satellite launch site in Unst once completed.

Shetland Flyer Aerial Media is an innovative small business offering a range of media and survey services using small unmanned aircraft. Their expertise in high accuracy mapping and geospatial using the latest drone technologies, delivering consistent and reliable accurate 3D models, dense clouds, digital surface terrain models and orthorectified photography. In addition to mapping and survey they provide a full range of aerial photography and videography services.

Shetland Flyer provided Shetland Space Centre with drone footage, aerial photographs and a 3D model of Looe Ness for surveys which will be used to assist with the continuing development of the airport.

CyberSmart provides a unique approach to automating cybersecurity and compliance in line with (and exceeding) government standards. In order to protect against over 90% of cyber incidents, CyberSmart's vision for the world is one in which no person thinks twice about the privacy of their data online because every business, no matter how small, understands what it means to be cyber secure and access to the tools to protect itself. Through having security accessible, we have achieved tremendous growth and protect tens of thousands of users.

CyberSmart provided Shetland Space Centre with the software and accreditation to ensure the company is in compliance with government cyber security standards.

Isles innovators urged to head online to learn about support and funding

Do you have a great idea that you think could be a big deal in technology or manufacturing? But you're not sure about what steps to take next? Local individuals, companies and organisations with innovative schemes to meet are invited to a free virtual event on Thursday 22nd October where they can find out how to access support and funding.

The event, from 09.30-11.30, is being hosted by Shetland Space Centre, Shetland Islands Council and the Shetland and Security Accelerator (SASA), a Government organisation that directly funds innovation ideas that benefit Scotland.

SEPTEMBER 10, 2020

New round of space site consultation events to be held in Perthshire

This is a week later than originally planned. Following the Scottish Government's introduction last week of temporary regulations which allow such events to be held virtually where public gatherings are banned, in order to be deemed to be planning applications to be "major" applications, SSC is seeking permission to build a vertical launch spaciport, including a launch pad complex, mobile launch platform and identification/signage tower building with associated security fencing, access and servicing at Looe Ness.

It also intends to create a launch and range control centre at the Saeve Vest Resort complex and construct a new section of access road through Northton, which is situated just north of the former East Ness. Both will be the subject of two smaller separate "minor" planning applications.

The minor consultation events will be attended by the project's local planning consultant and a representative of Shetland Space Centre who will be available to answer questions and provide any additional information or clarification as required.

For those interested parties unable to attend or who do not have access to the online consultation events, alternative means are being made available for contacting Shetland Space Centre via post, telephone and email to obtain further information and ask questions.

Spaceports in Scotland - Scotland's Secret Space Race

In the next two years Scotland will have launch capacity - completing the end-to-end offering in the Scottish space industry. Kim McAllister and Kristina Tamane discuss the future of launch in Scotland...
