The Honorable Christopher Wray
Director
Federal Bureau of Investigation
935 Pennsylvania Avenue, NW, Room 7240
Washington, DC 20535-0001

Dear Director Wray,

Yesterday, the New York Post published an article entitled, "Smoking-gun email reveals how Hunter Biden introduced Ukrainian businessman to VP dad." The article documents how a recently uncovered laptop and hard drive allegedly revealed e-mails to and from Hunter Biden that strongly indicated that former Vice President Joe Biden was, in fact, aware of his son's overseas dealings.

Most concerning in the article was the allegation that the Federal Bureau of Investigation (FBI) was in possession of this computer and hard drive back in December 2019. This action took place right at the end of the U.S. House of Representative's impeachment sham against President Donald J. Trump, and right before the U.S. Senate tried the case. A large portion of the President's legal defense case revolved around strong evidence that former Vice President Biden's son, Hunter, was peddling his influence to his father to land lucrative jobs overseas that he might not have otherwise been qualified for.

If the FBI was, in fact, in possession of this evidence and failed to alert the White House to its existence that would have given even more weight to the President's legal defense, this was a gross error in judgement and a severe violation of trust. The American people deserve the swift answers to these questions:

1. Was the FBI in possession of the laptop and hard drive that was documented in the New York Post article?
2. Did the FBI take any steps to authenticate the laptop, hard drive, and data that was uncovered?
3. Did anyone at the FBI brief officials at the Department of Justice or at the White House about this laptop or hard drive at any point since December 2019?
4. Why did the New York Post have the information about this laptop and hard drive before the American people?

We request answers to these questions by Thursday, October 22, 2020 at 5 PM EST.

Sincerely,

Andy Biggs
